SUNNY SYNTHETIC LAB FIXTURE | LAB-MATH-C

Festival Team Challenge

Independent transfer across facts, arrays, and word problems

Grade 3 mathematics

Student: Synthetic Learner | Date: 2026-08-08 | Version: RETURNED

1 A festival makes 7 teams with 6 children on each team. How many children? **OK**

42

2 Forty flags are placed in 5 equal rows. How many flags are in each row? **OK**

8

3 Fill in the missing factor: ___ x 8 = 48. **OK**

6

4 Write two multiplication equations represented by a 4-by-9 array. **OK**

4 x 9 = 36 and 9 x 4 = 36

5 Three booths each need 8 cups in the morning and 8 cups later. How many cups total? **OK**

48

6 Which story uses 6 x 7? A. 6 bags with 7 tokens each B. 6 tokens plus 7 tokens C. 7 tokens shared by 6 **OK**

A (A) (B) (C)

7 A child writes 5 x 9 = 40. Use a nearby fact to correct the answer. **OK**

5 x 10 is 50, so 5 x 9 is 45.

8 A stage has 36 lights. Draw two different equal-row arrays that use all 36. **X**

6 by 6 only

Teacher score: 7 / 8

Independent transfer is strong. Continue exploring multiple factor pairs for the same total.
